

Class Preparation Guide

Session Name: Principles and Practice of Osteopathic Medicine II: Osteopathic Considerations of Lower Back Pain

Instructor: P. Noto, D.O

Event Description: During this session we will explore the pathophysiology and diagnostic approaches to a patient who presents with acute or chronic pain in the lumbar and sacral regions. Patient demographics will be incorporated into an understanding of the natural history of back pain to begin building a differential. From there a variety of diagnostic modalities will be touched upon to narrow the possibilities.

Session Objectives:

1. Understand and recognize normal lumbar anatomy
2. Understand and recognize abnormal lumbar anatomy
3. Understand pathophysiology of common low back pain disorders
4. Understand and recognize the presentation of common low back pain disorders
5. Understand and recognize red flags commonly associated with low back pain

Additional Required Resource:

Suggested/supplemental reading: Scott RA, Heinking KP, Kuchera ML. Osteopathic considerations in orthopedics. In Seffinger MA, ed. *Foundations of Osteopathic Medicine: Philosophy, Science, Clinical Applications and Research*. 4th ed. Philadelphia, PA: Walters Kluwer, 2018: 1427-1437.
